INTRODUCTION

OBJECTIVES AND USER ASSUMPTIONS

Volume IV, Selected NCPP Work Files, provides users with documentation for data items that were included in the work files of the NINCDs Collaborative Perinatal Project. Its purpose is to help researchers retrieve data items from work files or to help researchers review methodology for generating an item. Researchers may also review published work based on a given work file. The user is assumed to be a researcher interested in retrieving data items from the NCPP work files. Of the computerized files available to researchers, the work files contain the best data available; researchers are encouraged to prefer these files whenever possible. Some work files are the result of detailed examination of original study forms by medical experts.

STRUCTURE OF VOLUME IV

Four types of work files are available: files that contain data that were basic to the NCPP, meant to augment the master file (W1, W2, W3, W4); special subject or study files (W5, W6, W7, W8, W9, W17, W18); serology files (W11, W12, W13, W14, W15, W16); and an administrative file (W10). Eighteen separate work files are documented here, listed below.

- W1 Socioeconomic index at registration
- W2 Socioeconomic index at seven years
- W3 Drugs taken during pregnancy, trade names
- W4 Drugs taken during pregnancy, active compounds
- W5 Congenital malformations, one and seven years
- W6 Cerebral palsy diagnosis
- W7 Abnormalities at seven years
- W8 Speech, language and hearing at eight years
- W9 Toxemia classification
- W10 Rupture of membranes
- W11 Survey of viral, bacterial, parasitic and fungal infections during pregnancy
- W12 Serological testing, complement fixation tests
- W13 Serological testing for toxoplasmosis and rubella
- W14 Serological testing, cord blood

- W15 Serological testing, abnormalities and controls
- W16 Serum specimen inventory
- W17 Family linkage
- W18 Visit summary

For each work file we have included:

- 1) a summary of the specific file. Summaries include a history of the work file, how the file was used, what the file contains, how the cases included in the work file were selected, the number of records available and selected references from the NCPP bibliography that enhance the description of the work file or directly resulted from use of the file. In many cases, additional references exist and may be found in the NCPP bibliography by either author name(s) or subject.
- 2) a description of the characteristics of the tape on which the work file is available.
- 3) a Table of Data Items showing each item included in the file; its data item ID, its location on the work file and its User's Guide title.
- 4) the code sheet; a description of each data item on the file which includes the original data item title, the location in the work file (often labeled tape location or card column), the coding scheme used, and the source of the original information (master file, variable file or work file). Since many different people generated work files, the style of the code sheet varies, but all code sheets include the mentioned items above.
- 5) the complete list of codes for items where a large list of codes were used.

EXAMPLE USE OF VOLUME IV

Users will normally turn to Volume IV after discovering that a general topic or data item of interest is contained in a work file, either directly from Volume I, through a perusal of Volume II or an examination of one of the computerized indexes to the User's Guide. Suppose, for example, you discover that information on socioeconomic index is contained in work files

W1 and W2 in an examination of the alphabetic index. In examining Volume IV, you'll find how and when this work file was created, specific data items that appear in the file and their locations on the work file. You will also learn how these items were coded. You will also find references to published articles concerning the data items in this work file.

MASTER FILE CARD NUMBER AND NINDB CASE NUMBER RATIONALE

Computer cards for each NCPP study form are numbered to reflect their origin and possible revisions. Card numbers are assigned to identify the type of data (subject), the presence of multiple cards in a series, NCPP study form and form revisions. The first five digits of each card on the master file are the card number. The study forms and card numbers are given in Figure 1.

The first fourteen columns of each master file computer card contain the master file card number and the NINDB case number. Table 1 identifies the function of each of these columns.

TABLE 1. Derivation of Master File Card Number and NINDB Case Number.

<u>Contents</u>	<u>Columns</u>
Master File Card Number	
card identifier	1
general subject matter	2
form number	3-4
revision code	5
NINDB Case Number	
collaborating institution	6-7
type of patient selection	8
gravida identification number	9-12
order of the pregnancy	13
identifies child or gravida	14

Column 1 identifies multiple cards in a series. It contains a zero for cards unique to a particular form (that is, no other cards are present), for example OB-3, or for cards where repetitive data are contained. Cards for OB-2 are an example of this second type; no new categories of information are included on successive cards, but previous births in excess of four must be

FIGURE 1. Cards on the Master File.

recorded on an add-on card. For card series where data entered are unique to a card and more than one card is required to complete the series, a "1" is used to designate the first card, for example OB-5. OB-57, PATH-2 and PEU-14 are exceptions to these rules.

The second digit on the card reveals the general subject matter covered by data on the card. All cards containing information pertaining to obstetrics, for example, are designated by a "3" in column 2; family histories are designated by a "5"; pathology with a "2"; pediatrics, with a "4"; and psychological testing with a "1".

Columns three and four reveal the form number. In the case of forms where old and new forms having different numbers are included together, the number of the latest form appears on the master file. This rule does not apply to data abstracted from several forms by NINCDS staff (ADM forms).

Column 5 of the card contains a revision code indicating which form or combination of forms was used in arriving at data on a particular card. A typical card will have one to three revision codes, with a zero indicating the first version of a form and "1", "2", and "3" indicating later revisions. As a rule, revision codes used on cards differ from card to card; investigators should check the definition of codes provided in Volume II to determine the meaning of revision codes used.

Each woman and child studied in the project received a unique case number (NINDB case number) composed of nine digits, recorded in columns 6 through 14 of all master file cards. The case number identified the institution, the mother and the child. The first two digits represented the collaborating institution (see Table 2). The third digit indicated the type of patient selection. A "1" was used for patients selected for the central core study; a "6" indicated that a patient had been transferred from one institution to another, and a "7" indicated that the patient was part of a special study undertaken by the collaborating institution. The fourth through seventh digits were used to identify the gravida, while the eighth digit identified the order of the pregnancy of a given gravida in the project. The ninth digit was used to identify the gravida or child of the pregnancy; "9" indicated the gravida, "0" indicated the child of a single birth, "1" indicated the first child of a multiple birth, "2" indicated the second child of a multiple birth, etc.

DATA ITEM IDENTIFICATION AND NAMING

The NCPP data base contains over 6700 different data items and blank filler locations on computer files. We have assigned each of these a unique identification and a terse, stylized name. Because names were chosen to facilitate use of this guide, they do not duplicate names used by NINDB during the active phase of the project. Users should consult appropriate documentation before using data items from the master, variable or work files (Volumes II, III and IV).

The data item identifiers consist of 11 characters. At the far left are four unique numbers that were assigned sequentially. The next character is always a period and is followed by up to six characters. For data items on the master file, these characters describe the data collection form from which a data item was derived; for data items on the variable (VAR) or work (WXX) files, these characters indicate the appropriate file. If the right side is less than six characters, periods are inserted as shown in these examples:

850..OB-34	an item from OB-34; on the master file
3650.PATH-3	an item from PATH-3; on the master file
5223....VAR	an item on the variable file
6340...W-10	an item on work file 10, Rupture of Membranes

We assigned the numbers sequentially as they appear in Volume V. For the master file, we followed the order in which the cards would be found within an NINDB case. All card columns are accounted for by one of our data item identifications. For the variable and work files, the numbers were assigned in the order that data items appear within a case.

We categorized each data item according to the person to whom the data refer, by the time of measurement and/or the time to which the item applies and by general type or subject area (Table 3). Then we assigned names to the data items using the following guidelines:

- The name and the three associated categories had to stand alone - they must describe the data item out of context.
- The first word in the data item name had to be an important or key word when all names were listed alphabetically as in Volumes VI and VII. Thus "cry, abnormal" was used rather than "abnormal cry" because a researcher is more likely to look for this item under "C" than under "A" in an alphabetic list.
- Secondary key words were preceded with a semicolon to facilitate preparation of the permuted index. For example, "abruptio; placenta" will be found under both the "A" and "P" portion of Volume VI.
- Qualifying words are delimited by commas and will not appear as keywords in Volume VI. Thus "abruptio; placenta, degree" will not be found in the "D" section.
- If medical terminology or usage has changed since the study was conducted, modern terms may be included and will be enclosed in brackets. Thus "mongolism; [Down's syndrome]" will appear under both the "M" and "D" portions of Volume VI.
- If measurement units are associated with a data item name, they are enclosed in parentheses and placed at the end of the name as in "Birthdate (yr)."
- The categories (person, time and subject) are appended to the right of the data item name.

Definitions for each category used in naming data items are given in Table 4 at the end of this introduction. Additional information is found in Chapter 4 of Volume I.

Data item names thus assigned are terse and highly stylized; as we have already indicated, they are not the names used by NINDB during the active phase of the project. Our aim was to develop standardized names that would stand alone. These names are intended to facilitate a user's search for data items potentially useful in a research project. Before an item is used, a researcher should consult its complete description. For a data item from the master files, e.g., 850..0B-34, the data item should be traced to the appropriate study form, e.g., 0B-34, located in Volume II. A variable file data item, e.g., 5223....VAR, is traced to Volume III, where it is defined and its original source given. A data item from a work file is traced to Volume IV for its description.

Some data items contained in the indexes may include the notation "DO NOT USE." These items are either inaccurate or an alternative data item is available that gives better information. Users will find more appropriate data items by consulting one of the indexes to the data items (Volumes, V, VI and VII).

TABLE OF DATA ITEMS: COLUMN HEADINGS

For each work file a computer generated list of all data items on the work file is given. This list enables a user to track a work file data item to other volumes of the User's Guide and to locate the data item on the work file. The computer listing has the following information.

<u>Column Heading</u>	<u>Description</u>
DATA ITEM ID	A unique identifier for this data item. See Data Item Identification and Naming above for details.
CARD NUM	Computer cards for the Serology work files (W11-W16) are numbered. Incorporated in the card number is the NCPP study number, a revision number and a card sequence number. See the code sheet for each work file for details.
FROM	Beginning card column for this data item.
TO	Ending card column for this data item.
DATA ITEM NAME	Terse stylized name for this data item. See Data Item Identification and Naming above for details.

TABLE 3. Abbreviations for Person, Time and Subject Categories

<u>Person</u>	<u>Time</u>	<u>Subject</u>
Mother	General	Administrative
Father	Preconception	Anesthesia

**TABLE 4. Definition of Person, Time
and Subject Categories**

<u>PERSON</u>	<u>DEFINITION</u>
Mother	Study registrant bearing the "study pregnancy"; biologic mother of the "study child"; gravida.
Father	Biologic father of the study child or study pregnancy; in the case of socioeconomic data, this category may indicate either the "father of baby" (not necessarily husband of the mother) or the "husband" (not necessarily related biologically to the study child).
Placenta	The organ of metabolic and gaseous interchange between the fetus and mother; also included in this category are gross and microscopic pathologic data from examination of the umbilical cord.
Fetus	Conceptus; the product of conception including the embryonic stage, i.e., from conception to the moment of birth.
Child	Product of the study pregnancy from the moment of birth onward; study child.
M Surrogate	Person or persons substituting for the mother of a study child, e.g., adoptive parents, foster parents or guardian.
Family	Person or persons biologically related to the mother or father of the study child.
Sibship	Child or children having one or both of the same biologic parents as the study child; siblings; half siblings; full siblings.

**TABLE 4. Definition of Person, Time
and Subject Categories (Cont.)**

<u>TIME</u>	<u>DEFINITION</u>
General	Data with no pertinent time period or data pertaining to more than one time period.
Preconception	Data pertaining to the period prior to conception of the study pregnancy.
Registration	Data collected at the time of study mother's registration in the study.
Prenatal	Data pertaining to the period from conception of the study pregnancy to delivery of the study child.
Admission	Data collected at the time of study mother's admission to the hospital for delivery of the study child.
Intrapartum	Data pertaining to the period from admission for delivery or onset of labor to delivery of the study child.
Delivery	Data pertaining to the time period during which delivery of the study child occurred.
Post Partum	Data (pertaining to the study mother) collected during the period immediately following birth of the study child.
Neonatal	Data pertaining to the study child during the period from birth to one month of age; the majority of these data were collected prior to or at the time a study child was discharged from the hospital.
Four Month	Data collected at the time of the four month examination of the study child.
Eight Month	Data collected at the time of the eight month examination of the study child.
One Year	Data collected at the time of the one year examination of the study child.
Three Year	Data collected at the time of the three year examination of the study child.
Four Year	Data collected at the time of the four year examination of the study child.
Seven Year	Data collected at the time of the seven year examination of the study child.
Eight Year	Data collected at the time of the eight year examination of the study child.

**TABLE 4. Definition of Person, Time
and Subject Categories (Cont.)**

SUBJECT	DEFINITION
Administrative	Data pertaining to the administrative aspects of the study.
Anesthesia	Data on medications and procedures used to obtain anesthesia.
Clin. Impression	Impression of abnormality or dysfunction gained by an examiner following evaluation of clinical signs and symptoms and including a subjective component.
Clinical Lab	Data obtained from laboratory examination of clinical specimens.
Current Pregnancy	Personal data and medically relevant information pertaining to the study pregnancy for which the mother is enrolled.
Environ. Exposure	Data on exposure to occupational or other environmental entities or hazards.
Events	Data related to a specific event, occurrence or incidence.
Hearing	Data obtained from examination and testing of hearing function.
Hospitalizations	Data on specific hospital admissions or the number of hospitalizations.
Language	Data obtained from examination and testing of language function.
Linkage	Data on the genetic relationships of family members to the study mother, father or child.
Malformations	Data on the conditions in which failure of normal development resulted in abnormal physical traits existing at the birth.
Diag. & Cond.	Data on specific diagnoses or conditions obtained from the medical history or examination during the study.
Med. History	Data obtained from the study participant or medical records relevant to past or current medical diagnoses or conditions.
Medications	Data on drugs or medications used.
Neurological Exam	Data obtained from observation and physical examination of the central nervous system.
Observations	Data obtained from observations not categorized elsewhere.
Pathology	Data obtained from clinical and anatomical pathological examination.
Physical Exam	Data obtained from physical examination of the study participant.
Procedure	Data relating to specific procedures performed on the study participant prior to or during the period of enrollment in the study.
Psych. Exam	Data obtained from the psychological examinations and observations.

**TABLE 4. Definition of Person, Time
and Subject Categories. (Cont.)**

SUBJECT	DEFINITION
Reproductive Hist.	Data pertaining to the outcome of pregnancies prior to and or during the period of enrollment in the study.
Serology	Data obtained from the laboratory examination of serum by specific immunologic methods.
Socioecon. Info	Data related to the social and economic characteristics and environment of the study participant.
Speech	Data obtained from examination and observation of speech function.
Vision	Data obtained from examination of the eyes.
Work History	Data pertaining to occupation and employment prior to and during the period of enrollment in the study.
X-Ray	Data on diagnostic x rays and diagnostic or therapeutic radiological procedures.
Summary	Data presented as a summary of data collected and recorded elsewhere.
Gyn. History	Medical history specifically related to the female genital tract, reproductive physiology and endocrinology.
Special Studies	Data pertaining to participation in other special organized studies conducted during the period of enrollment in the study.
Fam/Genetic Hist.	Data on the medical histories of family members genetically related to the study child.
SLH Exam	Data obtained from the speech, language and hearing examinations not specifically or exclusively related to one of these areas.

W1 SOCIOECONOMIC INDEX AT REGISTRATION

The Socioeconomic Index at Registration work file was constructed in the late 1960s as an integral part of the project. It provides a simple descriptive socioeconomic index for the population of the collaborative study. Education, occupation and family income were the variables used in the index.

This work file contains two socioeconomic indices and the associated component scores. The PRB (Perinatal Research Branch) index, which reflects only the distribution of income, education and occupation within the NCPP itself, is the "internal" index to allow description and categorization of the NCPP population only. The NAM (USBC) index, which uses scores for income, education and occupation taken from the corresponding scoring system of the Bureau of the Census, is the "external" index to enable comparison between the Perinatal Project population and the population of the United States.

The methodology for generating both indices closely follows that developed by the Bureau of the Census under the direction of Dr. Charles B. Nam. In this approach, individual scores for education, occupation and family income are combined to derive a composite numerical index. The difference between the indices is the assigning of the scores for each component.

Education and occupation were determined for the head of the household, the husband or the baby's father, or the gravida. Family income included income from all family members (including children).

Each socioeconomic index was obtained by averaging the component scores for education, occupation and family income. If all three components were available, the individual scores were added and the result divided by three. If two of the three components were available, the two scores were added and the result was divided by two. If only one component was available, the index was coded as unavailable. Which components were included in the index are recorded in another data item, Factors in Index.

More information concerning scoring for the components and the generation of these two indices is found in:

Myrianthopoulos, NC, and KS French, 1968. An application of the U.S. Bureau of the Census socioeconomic index to a large, diversified patient population. Soc Sci Med 2:283-299.

A description of some of the findings obtained from these indices are found in:

Nichols, PL, and VE Anderson, 1973. Intellectual performance, race, and economic status. Soc Biol 20:367-374.

WORK FILE CHARACTERISTICS

This work file contains 55,910 records. Each record is an 80 column card image in the standard master file format; card number 0590, revision 0 in positions 1-5, and the nine digit NINDB patient number in columns 6-14. The file is available on 1600 bpi 9 track tape with 400 characters per block.

TABLE OF DATA ITEMS

Socioeconomic index at registration

DATA ITEM IN	CARD NUM	FROM	TO	DATA ITEM NAME
6181.....W-1		1	5	Card number ("05900")

FRB Index

26-27

Code: 00, 95, 99

To compute index:

- A Add codes in Field 9, 10, 11
- B Divide by three. Compute to two digits; rounding to one decimal. This is the index.
- C If one of Field 9, 10, 11 is blank, average on the other two. In computing, divide by two.
- D If two of Fields 9, 10, 11 are blank, do not compute an index. Record as 99.

13

W2 SOCIOECONOMIC INDEX AT SEVEN YEARS

The Socioeconomic Index at Seven Years work file contains the socioeconomic index (SEI) and the component scores based on the child's living arrangements at the time of his 7-year followup. It was constructed in the 1970s as an integral part of the project.

Education, occupation and family income were the components used in this index. Education and occupation were determined for the head of the household, the husband or baby's father, or the gravida. Family income included income from all family members (including children).

Extensive effort went into the compilation of this 7-year index to minimize the effect of inflation on family income. Seven-year income was weighted differently than income at registration to make the two indices comparable. Furthermore, since the 7-year income values were obtained between 1966 and 1973, they were weighted differently, depending on the year of collection.

The 7-year socioeconomic index, which reflects only the distribution of income, education and occupation within the NCPP, should be compared to the PRB socioeconomic index at registration (see work file W1). A 7-year index comparable to the NAM SEI at registration does not exist; the Census Bureau did not calculate an SEI after the 1970 census.

A copy of the PRB socioeconomic index at registration is in this work file. In work file W1 (SEI at registration) the SEI at registration had a range of 0.0 to 9.5; here, it has a range of 0 to 95 (value from work file 1 multiplied by 10). This facilitates comparison to the 7-year SEI, which has a range of 0 to 98.

Further explanation of the methods used to calculate this 7-year index is available in:

Nichols, PL, and TC Chen, 1981. Minimal Brain Dysfunction: A Prospective Study. Hillsdale, NJ: Erlbaum.

WORK FILE CHARACTERISTICS

This work file contains 40,363 records; each record is 39 characters in length. The file is available on 1600 bpi 9 track tape with 1560 characters per block.

W3 DRUGS TAKEN DURING PREGNANCY, TRADE NAMES

The Drugs Taken During Pregnancy, Trade Names work file was created in the 1970s by Drs. Dennis Slone, O.P. Heinonen, R.R. Monson, E.B. Hook and Samuel Shapiro of the Drug Epidemiology Unit, Boston University Medical Center under contract N01-NS-2-2322.

This file is the by-product of the analysis of the relationships between the antenatal drug exposure and the appearance of malformations in the offspring. Before the analysis was undertaken the drug data in the NCPP master data file was reviewed and evaluated. This evaluation led to the reclassification, reorganization and recoding of the NCPP drug data and the creation of two drug files, W3 Drugs Taken During Pregnancy, Trade Names, and W4 Drugs Taken During Pregnancy, Active Compounds.

Information in the collection of the NCPP drug data and its preparation for analysis can be found in:

Heinonen, OP, D. Slone, S. Shapiro. 1977. Birth Defects and Drugs In Pregnancy. Littleton, MA: Publishing Sciences Group, Inc. pp. 10-11.

This work file contains data on 49,214 women. The cohort excludes the following:

- Non-core cases (did not meet sampling rules)
- Walk-ins (registered and delivered/aborted on the same day)
- Non-responders (cases lost prior to delivery)
- Orientals and other small race groups
- Pregnancies terminating in multiple births
- Abortions
- Clinically evident rubella during pregnancy
- Mothers of offspring not examined for malformation or tumor
- Drug usage during pregnancy unknown or unspecific drug information
- Cases in which the following data were unavailable
 - Sex of offspring
 - Birthweight of offspring
 - Previous pregnancy of the mother
 - Complications of the study gestation (except vomiting and umbilical cord pathology)
 - Diseases during study pregnancy

Each record contains 15 data items, the 9 digit NINDB case number, the 4 digit drug trade name, 12 positions that contain a code for the frequency of drug use in each lunar month of pregnancy, including four weeks prior to the last menstrual period, and 1 position that contains a code for the frequency of drug use when the month is unknown. The file contains one record for each drug used by each of 49,214 patients.

Two examples will illustrate how these data were constructed. Refer to the data coding instructions for the details of the coding scheme used.

Consider patient AAAAAAAAAA, who used Trisulfapyrimidine (code 1056) one day in the second lunar month, 1 to 7 days in the third lunar month, more than 7 days in the fourth lunar month and then discontinued use of this drug. The record generated would be:

AAAAAAAAAA105600123000000000 -- 1056 = trisulfapyrimidine

Consider patient BBBBBBBBBB who used Acetylphen (code 7268) on one day of each of the first 3 months and aspirin (code 2017) on one day of the sixth and seventh months. The 2 records generated would be:

BBBBBBBBBB726801110000000000 -- 7268 = acetylphen
BBBBBBBBBB201700000001100000 -- 2017 = aspirin

This work file W3 Drugs Taken During Pregnancy, Trade Names, or work file W4 Drugs Taken During Pregnancy, Active Compounds should be used instead of the drug data on the master file.

WORK FILE CHARACTERISTICS

This work file contains 199,088 records for 49,214 cases. Each record is 30 characters in length. The file is available on 1600 bpi 9 track tape with 6000 characters per block.
