There are two CD-ROM disks which are standalone but complementary. They contain or may be used to

complete non-restricted public use IBM/EBCDIC data transferred to PC/ASCII format - 32 datasets obtained from NARA

Subsets of that data - 61 ASCII datasets - obtained from NICHD, NIH

75 microfiche documents (29x) obtained from NARA transferred to 75 Adobe (Distiller) portable document format files

SAS/Windows 8.2e system datasets for selections from these data, at least one example of the SAS programs inputting the ASCII data into these SAS or other datasets, one example of the SAS processing log

the 75 microfiche documentation edited to match their contents, with IIA...pdf fiche 4-8 bookmarkedA

SPSS portable datasets and

STATA datasets (the software package used for instruction at JHU)

created in SAS using DBMS/ENGINES dbspsspr and dbstata (ver=64) engines.

The VARFILE - a selection of 1200 of 6700 variables used since 1973 as a summary of the CPP for both the whole 12 sites and the Johns Hopkins site separately for use by Fellows in the Department of Pediatrics, JHU.

Miscellaneous additional information useful in understanding the CPP and

Recreate everything used to produce the physical CD diskettes, labels, inserts, and covers.

There is a broad range of information and electronic data provided aimed at a broad range of IT, statistical, and analytic backgrounds and familiarity with the CPP and its constituent data.

IS THIS A SATISFACTORY OVERALL APPROACH? AND IS ANYTHING ESSENTIAL OMITTED?

Your suggestions and constructive criticisms are welcome. jlawlor@hsph.edu.
